Tabs re-organization:

- **Mutations**
  - drop-down menu
    - Oncoplot
    - Lollipop graph for point mutations
- **Expression profile**
  - drop-down menu
    - Heatmap
    - PCA? (showing PCA only with CRL input may be interesting)
  - sub-tabs on input section
    - mRNA
    - Protein
- **Functional Analysis**
  - drop-down menu
    - Differential Expression (for type/subtype)
    - Clinical Analysis (Descriptive statistics for type/subtype)
    - Drug Sensitibity
  - sub-tabs on input section
    - mRNA - use DESeq2
    - Protein - use DEqMS
    - Phosphoprotein - use blacksheepR (check MSstatsPTM package)
  - sub-tabs on output section - only for Differential Expression
    - Volcano plots
    - UpSet plots
  - sub-tabs on output section - only for Descriptive statistics
    - Boxplots w/statistics
    - Density plots w/statistics?
- **Correlation Analyses** - Let's prioritize this tab to try having a finished draft by the end of February 2023
  - drop-down menu
    - Gene vs Gene
      - scatter plot with linear regression of Spearman's rho correlation values
    - Gene vs All
      - U-shaped scatter plot with X: rho values Y: -log10(adj p-values)
    - Gene Panel
      - correlogram - using 'corrplot' R package
  - sub-tabs on input section
    - mRNA
    - Protein
    - mRNA/Protein - only for 'Gene vs Gene' and 'Gene Panel'
